

Revenue rose 8.6% to 23,694, but the conversion-rate increase must be verified before it is treated as a demand story.

Summary

- Total revenue was 23,694, up 8.6% from 21,820, while sessions were 22,508, down 9.9% from 24,991.
- The payload marks the conversion-rate increase from 1.0 to 1.52 with `check_tracking` true, so it is not a demand story.
- Referral and mobile segments moved above the total, while Canada and direct traffic moved below it.
- This is Google's public obfuscated GA4 sample, not a real client.

This week in numbers

Metric	This week	Previous	Change
Revenue	\$23,694	\$21,820	+8.6%
Transactions	366	291	+25.8%
Sessions	22,508	24,991	-9.9%
Conversion rate	1.52%	1.00%	+52.1%
Average order value	\$64.74	\$74.98	-13.7%
Revenue per session	\$1.05	\$0.87	+20.6%
Engagement rate	83.59%	83.91%	-0.4%

Weekly revenue across the replay. This week in navy.

What changed

Positive Total revenue up. Revenue was 23,694, up 8.6% from 21,820; transactions were 366, up 25.8% from 291; sessions were 22,508, down 9.9% from 24,991.

Warning Conversion-rate increase needs verification. Conversion rate was 1.52, up 52.1% from 1.0; the payload marks this figure with `check_tracking` true.

Positive Referral revenue outperformed total. Referral campaign revenue was 13,378, up 26.2% from 10,597, with `gap_vs_total_pts` 17.7 and `segment_share_pct` 56.5.

Positive Mobile revenue outperformed total. Mobile revenue was 10,610, up 35.3% from 7,842, with `gap_vs_total_pts` 26.7; mobile revenue per session was 1.19, up 51.6% from 0.78.

Critical Canada revenue underperformed total. Canada revenue was 1,739, down 45.3% from 3,181, with `gap_vs_total_pts` -53.9; Canada AOV was 57.97, down 41.7% from 99.41, with `gap_vs_total_pts` -28.

Likely drivers

- No calendar events are present, so seasonality cannot be explained from the payload.
- The total revenue increase is consistent with referral campaign revenue of 13,378, up 26.2%, and mobile revenue of 10,610, up 35.3%.
- The Canada decline is likely a segment-specific issue because Canada revenue was 1,739, down 45.3%, while total revenue was up 8.6%.
- The direct-traffic weakness is consistent with direct revenue per session of 0.23, down 41.9%, and direct checkout-to-purchase rate of 14.53, down 32.2%.

Risks if nobody acts

- If the conversion-rate figure is not verified, the team may act on a tracking artifact instead of real demand.
- If Canada and direct underperformance are ignored, the business may remain exposed to segment declines.
- If source data quality is ignored, channel actions may be based on 24.4% unknown or obfuscated source rows.

Actions

Priority	Action	Owner
High	Verify the conversion-rate tracking before using the 1.52 conversion rate in planning.	Analytics & tracking

The payload marks the conversion-rate increase as `check_tracking` true, so it is not a demand story. Evidence: `conversion_rate` current 1.52, previous 1, `change_pct` 52.1, `check_tracking` true

High	Review direct checkout-to-purchase and revenue per session to identify the drop. Direct traffic moved far below the total and shows lower checkout completion and revenue per session. Evidence: <code>direct_revenue_per_session</code> 0.23, down 41.9% from 0.4, <code>gap_vs_total_pts</code> -62.4; <code>direct_checkout_to_purchase_rate</code> 14.53, down 32.2% from 21.43, <code>gap_vs_total_pts</code> -48.4	E-commerce & CRO
High	Review Canada order composition and checkout experience to understand the revenue and AOV decline. Canada moved far below the total on revenue and AOV. Evidence: Canada revenue 1,739, down 45.3% from 3,181, <code>gap_vs_total_pts</code> -53.9; Canada AOV 57.97, down 41.7% from 99.41, <code>gap_vs_total_pts</code> -28	E-commerce & CRO

Data caveats

- The conversion-rate increase from 1.0 to 1.52 has `check_tracking` true; it must be verified before acting and is not a demand story.
- Treat `<Other>` and `(data deleted)` as obfuscated placeholders, not real channels or campaigns.
- Source breakdowns should be treated with caution because 24.4% of sessions rows are unknown or obfuscated.
- Session-level source is available for 73.5% of sessions; the rest use the user's first-touch source.
- Treat source breakdowns with caution: 24.4% of sessions rows are unknown or obfuscated.

How this brief was made

Every number was calculated in SQL and Python from GA4 event data. The written analysis was produced by qwen/qwen3.8-27b:free and checked by the number validator: 76 numbers checked, none invented, passed on attempt 2. Source: `bigquery-public-data.ga4_obfuscated_sample_ecommerce`. Public obfuscated GA4 sample (Google Merchandise Store). Architecture demonstration.
