

Revenue fell 10.3% to 43042 while sessions rose 11.9% to 31088, and the biggest funnel leak was Add to cart ➤ checkout.

Summary

- Total revenue was 43042, down 10.3% from 47973.
- Sessions were 31088, up 11.9%, and conversion rate was 1.9, up 2.4%.
- Cart to checkout rate was 54.18, down 47.3% from 102.82.
- Product view to cart rate was 33.65, up 76.1%, but the figure must be verified before acting.

This week in numbers

Metric	This week	Previous	Change
Revenue	\$43,042	\$47,973	-10.3%
Transactions	644	681	-5.4%
Sessions	31,088	27,780	+11.9%
Conversion rate	1.90%	1.85%	+2.4%
Average order value	\$66.84	\$70.44	-5.1%
Revenue per session	\$1.38	\$1.73	-19.8%
Engagement rate	85.88%	85.33%	+0.6%

Weekly revenue across the replay. This week in navy.

What changed

Warning Total revenue declined while traffic increased. Revenue was 43042, down 10.3% from 47973. Sessions were 31088, up 11.9% from 27780. Revenue per session was 1.38, down 19.8% from 1.73.

Watch Product view to cart rate rose, but tracking must be verified. Product view to cart rate was 33.65, up 76.1% from 19.11. `check_tracking` is true, so the figure must be verified before acting.

Critical Cart to checkout step weakened. Cart to checkout rate was 54.18, down 47.3% from 102.82. The anomaly has `segment_revenue_delta` -4931.

Warning Organic revenue per session underperformed total. (organic) campaign revenue per session was 1.23, down 36.6% from 1.94. `gap_vs_total_pts` was -16.7.

Positive Canada revenue moved differently from total. Canada revenue was 4561, up 53.7% from 2968. `gap_vs_total_pts` was 64.

Likely drivers

- The previous week included US Thanksgiving and Black Friday, while this week included Cyber Monday, so the revenue decline is likely consistent with post-Black Friday seasonality.
- The funnel shows the main change in Add to cart -> checkout, so the revenue decline is likely consistent with a checkout-step issue rather than a traffic issue.
- Organic revenue per session moved more negatively than total, so the organic mix is likely consistent with lower revenue per session.

Risks if nobody acts

- If the Add to cart -> checkout leak is not addressed, the total anomaly has `segment_revenue_delta` -4931.
- If product view to cart tracking is not verified, actions may be based on a figure that is not a demand story.
- If organic revenue per session is not reviewed, the `gap_vs_total_pts` of -16.7 remains a watch item.

Actions

Priority	Action	Owner
High	Verify the flagged product view to cart tracking figures before using them for decisions. The flagged figures are not a demand story and must be verified before acting. Evidence: Product view to cart rate was 33.65, up 76.1% from 19.11, and <code>check_tracking</code> is true.	Analytics & tracking

High	Review the Add to cart -> checkout step and test checkout fixes. The funnel's biggest leak is Add to cart -> checkout, and the total cart to checkout rate fell sharply. Evidence: Cart to checkout rate was 54.18, down 47.3% from 102.82, with segment_revenue_delta -4931.	E-commerce & CRO
Medium	Review organic landing pages and product relevance for organic sessions. Organic revenue per session moved more negatively than total, so organic content or product fit may need review. Evidence: (organic) campaign revenue per session was 1.23, down 36.6% from 1.94, with gap_vs_total_pts -16.7.	SEO & content

Data caveats

- Product view to cart rate figures with check_tracking true are not a demand story and must be verified before acting.
- Treat source breakdowns with caution: 24.4% of sessions rows are unknown or obfuscated, and session-level source is available for 73.5% of sessions.
- Do not recommend actions on <Other>, (data deleted), or (not set).
- This is Google's public obfuscated GA4 sample, not a real client.
- Session-level source is available for 73.5% of sessions; the rest use the user's first-touch source.

How this brief was made

Every number was calculated in SQL and Python from GA4 event data. The written analysis was produced by qwen/qwen3.8-27b:free and checked by the number validator: 55 numbers checked, none invented, passed on attempt 2. Source: bigquery-public-data.ga4_obfuscated_sample_ecommerce. Public obfuscated GA4 sample (Google Merchandise Store). Architecture demonstration.
