

Revenue rose 38.8% to 59721, driven by a 28.4% increase in users and a 5% lift in conversion rate, while India outperformed and Canada lagged.

Summary

- Total revenue was 59721, up 38.8% from 43042; transactions were 865, up 34.3% from 644.
- Sessions were 38729, up 24.6%; users were 31498, up 28.4%; conversion rate was 1.99, up 5% from 1.9.
- India revenue was 7512, up 117.9%, with a gap_vs_total_pts of 79.1; Canada revenue was 4323, down 5.2%, with revenue per session at 1.47, down 21.2%.
- Product view to add to cart remains the biggest funnel leak at 33.04, down 1.8% from 33.65.

This week in numbers

Metric	This week	Previous	Change
Revenue	\$59,721	\$43,042	+38.8%
Transactions	865	644	+34.3%
Sessions	38,729	31,088	+24.6%
Conversion rate	1.99%	1.90%	+5.0%
Average order value	\$69.04	\$66.84	+3.3%
Revenue per session	\$1.54	\$1.38	+11.4%
Engagement rate	87.38%	85.88%	+1.8%

Weekly revenue across the replay. This week in navy.

What changed

Positive Total revenue and transactions increased. Revenue was 59721, up 38.8% from 43042; transactions were 865, up 34.3% from 644; users were 31498, up 28.4% from 24534.

Positive India outperformed the total. India revenue was 7512, up 117.9% from 3448, with gap_vs_total_pts of 79.1; India revenue per session was 2.06, up 72.1% from 1.2, with gap_vs_total_pts of 60.7.

Warning Canada lagged the total. Canada revenue was 4323, down 5.2% from 4561, while sessions were up 20.3%; Canada revenue per session was 1.47, down 21.2% from 1.87, with gap_vs_total_pts of -32.6.

Watch Checkout improved but product-to-cart remains the biggest leak. Product view to add to cart was 33.04, down 1.8% from 33.65; add to cart to checkout was 58.25, up 7.5%; checkout to purchase was 48.8, up 17.4%.

Likely drivers

- No calendar event is listed for this week; the previous week included Cyber Monday, so the increase is likely not a listed-event spike.
- India revenue and revenue per session moved far above the total, consistent with a country-specific demand increase.
- Canada sessions rose 20.3% but revenue fell 5.2%, consistent with weaker monetization in that segment.

Risks if nobody acts

- If Canada revenue per session stays at 1.47 while the total is 1.54, Canada could continue to drag total growth.
- If the product view to add to cart step stays at 33.04, additional traffic may not convert into carts.
- Source and campaign data quality issues could lead to decisions based on incomplete channel attribution.

Actions

Priority	Action	Owner
High	Investigate and document what is driving the India revenue increase, then assess whether the same levers can be applied to other underperforming markets. India revenue was 7512, up 117.9% from 3448, with gap_vs_total_pts of 79.1, far above the total 38.8% increase. Evidence: India revenue 7512 vs 3448, change_pct 117.9, gap_vs_total_pts 79.1; India revenue_per_session 2.06 vs 1.2, change_pct 72.1, gap_vs_total_pts 60.7	Performance marketing
Medium		

	Review Canada product pages and checkout flow to identify why sessions up 20.3% did not translate into revenue growth. Canada revenue was 4323, down 5.2% from 4561, while sessions were up 20.3%; revenue per session was 1.47, down 21.2% from 1.87, with gap_vs_total_pts of -32.6. Evidence: Canada revenue 4323 vs 4561, change_pct -5.2; sessions_change_pct 20.3; revenue_per_session 1.47 vs 1.87, change_pct -21.2, gap_vs_total_pts -32.6	E-commerce & CRO
Medium	Run a CRO test on the product view to add to cart step, which is the biggest funnel leak. Product view to add to cart was 33.04, down 1.8% from 33.65, and is flagged as the biggest leak in the funnel. Evidence: Product view to add to cart 33.04 vs 33.65, change_pct -1.8, change_points -0.62; flagged as biggest_leak	E-commerce & CRO

Data caveats

- This is Google's public obfuscated GA4 sample dataset (Google Merchandise Store), not a real client.
- Session-level source is available for only 73.5% of sessions; 24.4% of source rows are unknown or obfuscated. Treat source breakdowns with caution.
- Channels and campaigns include obfuscated placeholders such as <Other> and (data deleted); no actions should be taken on those segments.
- Session-level source is available for 73.5% of sessions; the rest use the user's first-touch source.
- Treat source breakdowns with caution: 24.4% of sessions rows are unknown or obfuscated.

How this brief was made

Every number was calculated in SQL and Python from GA4 event data. The written analysis was produced by qwen/qwen3.8-27b:free and checked by the number validator: 103 numbers checked, none invented, passed on attempt 2. Source: bigquery-public-data.ga4_obfuscated_sample_ecommerce. Public obfuscated GA4 sample (Google Merchandise Store). Architecture demonstration.
