

Revenue and transactions fell 20.8% week over week, with the biggest funnel leak at Add to cart ➡ checkout.

Summary

- Revenue was 47276 vs 59721 previous week, a -20.8% change, and transactions were 685 vs 865, a -20.8% change.
- Sessions were 33411 vs 38729, -13.7%, and conversion rate was 1.64 vs 1.99, -17.6%.
- Add to cart -> checkout was 48.49 vs 58.25, -16.7%, and is the biggest funnel leak.
- Direct transactions were 65 vs 49, +32.7%, and direct revenue per session was 0.86 vs 0.67, +28.9%.

This week in numbers

Metric	This week	Previous	Change
Revenue	\$47,276	\$59,721	-20.8%
Transactions	685	865	-20.8%
Sessions	33,411	38,729	-13.7%
Conversion rate	1.64%	1.99%	-17.6%
Average order value	\$69.02	\$69.04	+0.0%
Revenue per session	\$1.41	\$1.54	-8.2%
Engagement rate	88.11%	87.38%	+0.8%

Weekly revenue across the replay. This week in navy.

What changed

Critical Total revenue and transactions declined. Revenue was 47276 vs 59721, -20.8%; transactions were 685 vs 865, -20.8%.

Warning Cart-to-checkout step weakened. Add to cart -> checkout was 48.49 vs 58.25, -16.7%, and is the biggest funnel leak.

Positive Direct segment moved differently. Direct transactions were 65 vs 49, +32.7%, with gap_vs_total_pts 53.5; direct revenue per session was 0.86 vs 0.67, +28.9%, with gap_vs_total_pts 37.2.

Warning High-interest products did not convert. Android Large Trace Journal Black had 3401 views, 1420 adds to cart, and 0 purchase lines; Google F/C Long Sleeve Tee Ash had 6353 views, 2325 adds to cart, and 0 purchase lines.

Likely drivers

- The total decline is likely consistent with fewer sessions and users: sessions 33411 vs 38729, -13.7%, and users 27421 vs 31498, -12.9%.
- The conversion drop is likely consistent with the Add to cart -> checkout leak: 48.49 vs 58.25, -16.7%.
- Direct traffic is likely a partial offset: direct transactions 65 vs 49, +32.7%, and direct revenue per session 0.86 vs 0.67, +28.9%.
- Product performance may be contributing: Google Men's Tech Fleece Grey had revenue_delta -1226, and several high-interest products had 0 purchase lines.

Risks if nobody acts

- If the Add to cart -> checkout leak persists, users who add items may not complete purchases.
- If high-interest products remain unconverted, product interest will not become revenue.
- If returning purchasers continue to decline, revenue will rely more on new purchasers: returning_purchasers were 34 vs 57, -40.4%, and revenue_from_returning was 2514 vs 5877, -57.2%.

Actions

Priority	Action	Owner
High	Run a checkout friction review for the Add to cart -> checkout step, including checkout entry, shipping/payment options, and error states. The biggest funnel leak is at this step, and total revenue and transactions are down. Evidence: Add to cart -> checkout was 48.49 vs 58.25, -16.7%, and is the biggest funnel leak.	E-commerce & CRO
High	Review PDP content, price display, and product information for top decliners and high-interest low-conversion products. Some products have high interest but no purchases, and top decliners show large revenue declines. Evidence: Google Men's Tech Fleece Grey had revenue_delta -1226	Merchandising

with 4791 views and 3 units; Android Large Trace Journal Black had 3401 views, 1420 adds to cart, and 0 purchase lines.

Medium	Create a win-back flow for one-time lapsing and at-risk high-value customers. Returning revenue is down and these RFM segments show recent but lapsed purchase behavior. Evidence: one_time_lapsing had 638 customers, revenue_to_date 42374, and avg_recency_days 39.2; at_risk_high_value had 16 customers, revenue_to_date 3469, and avg_recency_days 47.4.	CRM & retention

Data caveats

- This is Google's public obfuscated GA4 sample, not a real client.
- No calendar events are provided, so seasonality is not explained.
- Treat source breakdowns with caution: session-level source is available for 73.5% of sessions; source unusable_pct is 24.4, campaign unusable_pct is 17.4, and medium unusable_pct is 14.1.
- Do not act on placeholder channels or campaigns such as <Other> and (data deleted).
- Session-level source is available for 73.5% of sessions; the rest use the user's first-touch source.

How this brief was made

Every number was calculated in SQL and Python from GA4 event data. The written analysis was produced by qwen/qwen3.8-27b:free and checked by the number validator: 82 numbers checked, none invented, passed on attempt 2. Source: bigquery-public-data.ga4_obfuscated_sample_ecommerce. Public obfuscated GA4 sample (Google Merchandise Store). Architecture demonstration.
