

Total revenue fell to 14716 from 47276, a -68.9% change.

Summary

- Revenue, transactions, sessions, and conversion rate all declined week over week.
- The week included Christmas Eve, Christmas Day, and Boxing Day, which likely contributed to lower demand.
- Revenue per session is flagged for tracking verification before it is used for decisions.

This week in numbers

Metric	This week	Previous	Change
Revenue	\$14,716	\$47,276	-68.9%
Transactions	257	685	-62.5%
Sessions	22,083	33,411	-33.9%
Conversion rate	1.06%	1.64%	-35.8%
Average order value	\$57.26	\$69.02	-17.0%
Revenue per session	\$0.67	\$1.41	-52.9%
Engagement rate	89.49%	88.11%	+1.6%

Weekly revenue across the replay. This week in navy.

What changed

Critical Total revenue decline. Revenue current 14716 previous 47276
change_pct -68.9.

Critical Total transactions decline. Transactions current 257 previous 685
change_pct -62.5.

Critical Conversion rate decline. Conversion rate current 1.06 previous 1.64 change_pct -35.8 change_points -0.59.

Critical Sessions decline. Sessions current 22083 previous 33411 change_pct -33.9.

Warning Canada revenue moved differently from total. Canada revenue current 2086 previous 4409 change_pct -52.7 gap_vs_total_pts 16.2.

Likely drivers

- The calendar events Christmas Eve, Christmas Day, and Boxing Day are likely consistent with lower sessions, transactions, and revenue.
- The Product view -> add to cart step fell from 29.57 to 23.94, likely reducing the number of carts created.
- High-interest low-conversion products show high views and adds but 0 purchase lines, likely indicating product-page or checkout friction.

Risks if nobody acts

- If revenue per session tracking is not verified, decisions may be based on an unreliable figure.
- If the product-to-cart leak is not addressed, fewer sessions will become transactions.
- If at-risk high-value customers are not prioritized, returning revenue may remain weak.

Actions

Priority	Action	Owner
High	Verify revenue per session tracking and attribution before using the metric in marketing decisions. The revenue per session anomaly is flagged for tracking verification. Evidence: Revenue per session current 0.67 previous 1.41 change_pct -52.9 check_tracking true.	Analytics & tracking
High	Run a CRO test on the Google Eco Tee Black product detail page to improve add-to-cart and purchase completion. The biggest funnel leak is Product view -> add to cart, and this high-interest product has adds but no purchases. Evidence: Product view -> add to cart current 23.94 previous 29.57 change_pct -19; Google Eco Tee Black views_cur 2711 adds_to_cart_cur 1063 purchase_lines_cur 0.	E-commerce & CRO
Medium	Create a CRM win-back list for at-risk high-value customers and assign follow-up. At-risk high-value customers have high spend and have not purchased recently. Evidence: At-risk high value customers 58 avg_spend 192.93 avg_recency_days 50.4.	CRM & retention

Data caveats

- Revenue per session current 0.67 previous 1.41 change_pct -52.9 has check_tracking true and must be verified before acting.
- Treat <Other> and (data deleted) as obfuscated placeholders, not real channels or campaigns.
- Session-level source is available for 73.5% of sessions; 24.4% of sessions rows are unknown or obfuscated.
- This is Google's public obfuscated GA4 sample, not a real client.
- Session-level source is available for 73.5% of sessions; the rest use the user's first-touch source.

How this brief was made

Every number was calculated in SQL and Python from GA4 event data. The written analysis was produced by qwen/qwen3.8-27b:free and checked by the number validator: 37 numbers checked, none invented, passed on attempt 2. Source: bigquery-public-data.ga4_obfuscated_sample_ecommerce. Public obfuscated GA4 sample (Google Merchandise Store). Architecture demonstration.
