

Post-holiday revenue and conversion fell sharply, with mobile and Canada underperforming the total.

Summary

- Revenue was 10368 vs 14716 (-29.5%), transactions were 165 vs 257 (-35.8%), and conversion rate was 0.68 vs 1.06 (-36%).
- Sessions were 20444 vs 22083 (-7.4%), so the revenue drop is not explained by traffic alone.
- Mobile and Canada moved further below the total, while total AOV rose to 62.84 vs 57.26 (+9.7%).

This week in numbers

Metric	This week	Previous	Change
Revenue	\$10,368	\$14,716	-29.5%
Transactions	165	257	-35.8%
Sessions	20,444	22,083	-7.4%
Conversion rate	0.68%	1.06%	-36.0%
Average order value	\$62.84	\$57.26	+9.7%
Revenue per session	\$0.51	\$0.67	-23.9%
Engagement rate	94.11%	89.49%	+5.2%

Weekly revenue across the replay. This week in navy.

What changed

Critical Total revenue and conversion fell after the holiday week. Revenue was 10368 vs 14716 (-29.5%), transactions were 165 vs 257 (-35.8%), and conversion rate was 0.68 vs 1.06 (-36%).

Critical Mobile monetization fell more than the total. Mobile revenue per session was 0.26 vs 0.59 (-55.4%, gap_vs_total_pts -31.5) and mobile AOV was 28.63 vs 44.85 (-36.2%, gap_vs_total_pts -45.9).

Critical Canada fell more than the total. Canada revenue per session was 0.29 vs 1.34 (-78.4%, gap_vs_total_pts -54.5) and Canada conversion rate was 0.51 vs 1.54 (-67.1%, gap_vs_total_pts -31.1).

Positive AOV rose while transactions fell. Total AOV was 62.84 vs 57.26 (+9.7%) and desktop AOV was 92.42 vs 68.74 (+34.4%, gap_vs_total_pts 24.7), while total transactions were 165 vs 257 (-35.8%).

Warning High-interest products had zero purchases. Android Iconic Crewneck Sweatshirt had views_cur 1366, adds_to_cart_cur 486, purchase_lines_cur 0, view_to_purchase_pct 0, and revenue_delta -616.

Likely drivers

- The week followed Christmas Eve, Christmas Day, and Boxing Day, so the drop is likely a post-holiday demand reset.
- New Year's Eve and New Year's Day may have reduced purchase intent, consistent with lower transactions and conversion.
- Mobile and Canada gaps are consistent with a larger post-holiday reset in those segments, but the size of the gaps suggests segment-specific issues to verify.
- The AOV increase is consistent with fewer, larger orders after the holiday peak.

Risks if nobody acts

- If mobile and Canada issues are not checked, the revenue decline may continue into the next week.
- If high-interest products remain at zero purchases, product demand will not convert.
- If source data is not treated with caution, channel decisions may be based on obfuscated or missing source values.

Actions

Priority	Action	Owner
High	Validate Canada tracking and purchase data before changing media or offers Canada is far below the total on revenue per session and conversion rate. Evidence:	Analytics & tracking

Canada revenue per session 0.29 vs 1.34 (-78.4%, gap_vs_total_pts -54.5); Canada conversion rate 0.51 vs 1.54 (-67.1%, gap_vs_total_pts -31.1).

High	Review mobile product-to-cart and checkout paths Mobile monetization is far below the total, so the mobile purchase path needs a focused check. Evidence: Mobile revenue per session 0.26 vs 0.59 (-55.4%, gap_vs_total_pts -31.5); mobile AOV 28.63 vs 44.85 (-36.2%, gap_vs_total_pts -45.9).	E-commerce & CRO
High	Review the Android Iconic Crewneck Sweatshirt product page and purchase path The product has high views and adds but no purchases, and it is a top decliner. Evidence: Android Iconic Crewneck Sweatshirt views_cur 1366, adds_to_cart_cur 486, purchase_lines_cur 0, view_to_purchase_pct 0, revenue_delta -616.	Merchandising

Data caveats

- Treat source and campaign breakdowns with caution: 24.4% of sessions rows are unknown or obfuscated, and session-level source is available for 73.5% of sessions.
- <Other>, (data deleted), and (not set) are obfuscated placeholders; do not act on them.
- This is Google's public obfuscated GA4 sample, not a real client.
- Session-level source is available for 73.5% of sessions; the rest use the user's first-touch source.
- Treat source breakdowns with caution: 24.4% of sessions rows are unknown or obfuscated.

How this brief was made

Every number was calculated in SQL and Python from GA4 event data. The written analysis was produced by qwen/qwen3.8-27b:free and checked by the number validator: 74 numbers checked, none invented. Source: bigquery-public-data.ga4_obfuscated_sample_ecommerce. Public obfuscated GA4 sample (Google Merchandise Store). Architecture demonstration.
