

Traffic and users rose sharply, but revenue fell 9.3% to 9,402 as conversion and AOV declined.

Summary

- Sessions rose 42% to 29,029 and users rose 37.7% to 24,710.
- Revenue fell 9.3% to 9,402 while transactions rose 3% to 170.
- Conversion rate fell from 0.68 to 0.56 and AOV fell from 62.84 to 55.31.
- The previous week included New Year's Eve and New Year's Day, so part of the week-over-week move may be calendar timing.

This week in numbers

Metric	This week	Previous	Change
Revenue	\$9,402	\$10,368	-9.3%
Transactions	170	165	+3.0%
Sessions	29,029	20,444	+42.0%
Conversion rate	0.56%	0.68%	-17.3%
Average order value	\$55.31	\$62.84	-12.0%
Revenue per session	\$0.32	\$0.51	-36.1%
Engagement rate	94.24%	94.11%	+0.1%

Weekly revenue across the replay. This week in navy.

What changed

Warning Traffic up, revenue down. Sessions rose 42% to 29,029, but revenue fell 9.3% to 9,402 and revenue per session fell from 0.51 to 0.32.

Warning Checkout step weakened. Checkout -> purchase fell from 52.87 to 46.96, a -11.2% change, and total conversion rate fell from 0.68 to 0.56.

Warning US AOV fell sharply. United States AOV fell from 79.96 to 47.32, -40.8%, with a -28.8 point gap versus total AOV.

Positive Mobile revenue recovered. Mobile revenue rose 62% to 3,385 and mobile AOV rose from 28.63 to 54.6, a +102.7 point gap versus total AOV.

Likely drivers

- The previous week included New Year's Eve and New Year's Day, so the revenue and AOV decline may be calendar timing.
- The total traffic_vs_revenue anomaly is consistent with sessions up 42% while revenue fell 9.3%.
- The checkout-to-purchase step fell from 52.87 to 46.96, consistent with a checkout-stage issue.
- United States AOV fell from 79.96 to 47.32, consistent with lower US order values.

Risks if nobody acts

- If the checkout-to-purchase decline persists, higher sessions will not convert into revenue.
- If US AOV weakness persists, total revenue will remain below the prior week.
- If source attribution is not validated, channel decisions may rely on unreliable splits.

Actions

Priority	Action	Owner
High	Audit the final checkout step and run one test on desktop and US sessions. The biggest funnel leak is checkout to purchase, and desktop and US revenue fell while sessions rose. Evidence: Checkout -> purchase: 46.96 vs 52.87, -11.2%; desktop revenue: 5,912 vs 7,948, -25.6%; United States revenue: 3,833 vs 5,437, -29.5%.	E-commerce & CRO
Medium	Validate source, campaign, and channel attribution before reallocating spend. A large share of session source fields is unusable, and channel splits include obfuscated placeholders. Evidence: source unusable_pct: 24.4; session_level_source unusable_pct: 26.5; total sessions: 29,029.	Analytics & tracking
Medium	Launch a win-back email flow for at-risk high-value customers. At-risk high-value customers increased and have high average spend. Evidence: at_risk_high_value customers: 157 vs 120; avg_spend: 193.54; avg_recency_days: 58.8.	CRM & retention

Data caveats

- This is Google's public obfuscated GA4 sample, not a real client.
- Treat source and campaign breakdowns with caution: source unusable_pct is 24.4 and session_level_source unusable_pct is 26.5.

- <Other>, (data deleted), and (not set) are obfuscated placeholders and should not be used for actions.
- Session-level source is available for 73.5% of sessions; the rest use the user's first-touch source.
- Treat source breakdowns with caution: 24.4% of sessions rows are unknown or obfuscated.

How this brief was made

Every number was calculated in SQL and Python from GA4 event data. The written analysis was produced by qwen/qwen3.8-27b:free and checked by the number validator: 58 numbers checked, none invented, passed on attempt 2. Source: bigquery-public-data.ga4_obfuscated_sample_ecommerce. Public obfuscated GA4 sample (Google Merchandise Store). Architecture demonstration.
