

Revenue rose 39.9% to 13150 while sessions fell 4.6%, with conversion rate up 46.8% to 0.82.

Summary

- This week's revenue was 13150, up 39.9% from 9402.
- Sessions were 27707, down 4.6% from 29029, while conversion rate rose.
- Conversion rate was 0.82, up 46.8% from 0.56, and revenue per session was 0.47, up 46.5% from 0.32.
- This is Google's public obfuscated GA4 sample, not a real client.

This week in numbers

Metric	This week	Previous	Change
Revenue	\$13,150	\$9,402	+39.9%
Transactions	253	170	+48.8%
Sessions	27,707	29,029	-4.6%
Conversion rate	0.82%	0.56%	+46.8%
Average order value	\$51.98	\$55.31	-6.0%
Revenue per session	\$0.47	\$0.32	+46.5%
Engagement rate	93.83%	94.24%	-0.4%

Weekly revenue across the replay. This week in navy.

What changed

Positive Revenue and transactions rose. Revenue was 13150 vs 9402, change_pct 39.9; transactions were 253 vs 170, change_pct 48.8.

Watch Traffic fell. Sessions were 27707 vs 29029, change_pct -4.6; users were 23375 vs 24710, change_pct -5.4.

Positive Conversion improved. Conversion rate was 0.82 vs 0.56, change_pct 46.8; add to cart to checkout was 42.15 vs 35.94, change_pct 17.3.

Watch AOV fell. AOV was 51.98 vs 55.31, change_pct -6.

Positive Some segments moved more than total. Mobile revenue was 6357, revenue_change_pct 87.8; Canada revenue was 1638, revenue_change_pct 283.6; total revenue change_pct was 39.9.

Likely drivers

- No calendar events are provided, so the lift is not explained by a known seasonal event.
- The revenue lift is consistent with conversion rate rising from 0.56 to 0.82 and revenue per session rising from 0.32 to 0.47.
- The improvement is likely supported by the add-to-cart to checkout step rising from 35.94 to 42.15.
- New-purchaser revenue rose from 8321 to 12041, while returning-purchaser revenue was 1147, so the week likely relied more on new buyers.

Risks if nobody acts

- If sessions continue to fall, the conversion lift may not offset the traffic decline.
- AOV fell to 51.98, so revenue per transaction may weaken if basket value does not recover.
- Source attribution is incomplete, with 24.4% of session source rows unusable, so channel performance may be misread.
- High-interest products with zero purchase lines may leave demand unconverted.

Actions

Priority	Action	Owner
High	Validate the source attribution and funnel data behind the conversion lift before using it for channel decisions. The conversion lift is large, but source data quality is incomplete. Evidence: conversion_rate current 0.82 vs previous 0.56, change_pct 46.8; session source unusable_pct 24.4.	Analytics & tracking
High	Run a CRO test on the cart-to-checkout flow to confirm the improvement is stable. The cart-to-checkout step improved and is likely contributing to the conversion lift. Evidence: Add to cart -> checkout current 42.15 vs previous 35.94, change_pct 17.3; conversion_rate current 0.82 vs previous 0.56.	E-commerce & CRO
Medium	Audit the product page and purchase path for the five high-interest low-conversion products. These products have views and adds but no purchase lines, so demand may not be	E-commerce & CRO

converting. Evidence: Google Blue Stajo Cup views_cur 1099, adds_to_cart_cur 221, purchase_lines_cur 0; Google Cloud Unisex Zip Hoodie views_cur 2051, adds_to_cart_cur 521, purchase_lines_cur 0.

Data caveats

- This is Google's public obfuscated GA4 sample, not a real client.
- No calendar events are provided, so seasonality cannot be confirmed.
- Treat source breakdowns with caution: 24.4% of sessions rows are unknown or obfuscated.
- Session-level source is available for 73.5% of sessions; the rest use the user's first-touch source.

How this brief was made

Every number was calculated in SQL and Python from GA4 event data. The written analysis was produced by qwen/qwen3.8-27b:free and checked by the number validator: 67 numbers checked, none invented, passed on attempt 2. Source: bigquery-public-data.ga4_obfuscated_sample_ecommerce. Public obfuscated GA4 sample (Google Merchandise Store). Architecture demonstration.
