

Revenue fell 80.8% to 5178 while sessions fell only 4.1%, with a large AOV drop that needs tracking verification.

Summary

- Total revenue was 5178, down 80.8% from 26966.
- Sessions were 26342, down 4.1% from 27478, and conversion rate was 1.18, down 13.8% from 1.36.
- Average order value was 15.32, down 77.3% from 67.42.
- No calendar events are provided to explain seasonality.

This week in numbers

Metric	This week	Previous	Change
Revenue	\$5,178	\$26,966	-80.8%
Transactions	338	400	-15.5%
Sessions	26,342	27,478	-4.1%
Conversion rate	1.18%	1.36%	-13.8%
Average order value	\$15.32	\$67.42	-77.3%
Revenue per session	\$0.20	\$0.98	-80.0%
Engagement rate	93.11%	93.69%	-0.6%

Weekly revenue across the replay. This week in navy.

What changed

Critical Total revenue and order value fell sharply. Revenue was 5178 vs 26966 (-80.8%), AOV was 15.32 vs 67.42 (-77.3%), and revenue per session was 0.2 vs 0.98 (-80%).

Warning Traffic was stable but conversion weakened. Sessions were 26342 vs 27478 (-4.1%), users were 21590 vs 22647 (-4.7%), and conversion rate was 1.18 vs 1.36 (-13.8%).

Warning Checkout step weakened. Add to cart -> checkout was 53.31 vs 56.62 (-5.9%, -3.31 points) and was the biggest funnel leak.

Warning Some countries showed weaker product view to cart. Canada view_to_cart_rate was 16.85 vs 22.11 (-23.8%) and India was 13.29 vs 16.91 (-21.4%).

Positive Organic traffic increased. Organic sessions were 13640 vs 12036 (+13.3%) and organic users were 12644 vs 11351 (+11.4%).

Likely drivers

- No calendar events are provided, so seasonality cannot be explained from the payload.
- The total revenue drop is likely consistent with the large drop in AOV (15.32 vs 67.42) and revenue per session (0.2 vs 0.98), while sessions and users changed less.
- The funnel change is consistent with a weaker Add to cart -> checkout step (53.31 vs 56.62).
- The revenue drop is consistent with lower revenue on high-revenue items, including Google Crewneck Sweatshirt Green revenue of 275 vs 1925 and Gift Card- \$100.00 revenue of 0 vs 1200.

Risks if nobody acts

- If the AOV and revenue per session drop is not verified, marketing may act on a tracking error.
- If the checkout leak is not addressed, more carts may stop before purchase.
- If high-value at-risk customers are not retained, the at-risk high value segment may keep growing from 470 to 668.

Actions

Priority	Action	Owner
High	Verify the AOV and revenue per session tracking setup before acting on the revenue drop. The total AOV and revenue per session anomalies are flagged for tracking verification. Evidence: AOV current 15.32, previous 67.42, change -77.3%; revenue per session current 0.2, previous 0.98, change -80%.	Analytics & tracking
High	Review the checkout flow after add to cart. The Add to cart -> checkout step was the biggest funnel leak. Evidence: Add to cart -> checkout current 53.31, previous 56.62, change -5.9%, -3.31 points.	E-commerce & CRO
Medium		

Build a retention list for at-risk high-value customers.

CRM &

The at-risk high value segment grew and has high average spend. Evidence: At-risk high retention value customers current 668, previous 470, avg_spend 199.57, avg_recency_days 65.6.

Data caveats

- Total AOV and total revenue per session have check_tracking true; verify before acting.
- Source breakdowns should be treated with caution because 24.4% of sessions rows are unknown or obfuscated.
- <Other>, (data deleted), and (not set) are placeholders and should not be used for actions.
- No calendar events are provided, so seasonality is not explained.
- Session-level source is available for 73.5% of sessions; the rest use the user's first-touch source.

How this brief was made

Every number was calculated in SQL and Python from GA4 event data. The written analysis was produced by qwen/qwen3.8-27b:free and checked by the number validator: 75 numbers checked, none invented, passed on attempt 3. Source: bigquery-public-data.ga4_obfuscated_sample_ecommerce. Public obfuscated GA4 sample (Google Merchandise Store). Architecture demonstration.
